

Free Applications

Hundreds of Apps with Potential to Enhance Professional Development, Technical Assistance, and Dissemination Activities and Results

By Larry Edelman larry.edelman@ucdenver.edu

Note: This document (v. 9 – 3/1/11) is updated frequently. Updates and related discussions are posted at: <http://exploringtech.wordpress.com/>

Why should we use technology for PD, TA, and Dissemination?

- In particular, technology can help us to efficiently, effectively, and creatively:
 1. Create content;
 2. Share knowledge; and
 3. Build and support relationships.

We should consider ALL applications that are available to us. This includes applications that are expensive, moderately priced, inexpensive (shareware), and free (freeware). This includes software that we download to our computers and software that runs on the web. Some expensive applications enable us to us to communicate in very unique and effective ways, while the functions of other expensive applications can be easily replicated, or even improved upon, by the use of freeware. Likewise, some free applications are all we need to get the job done, while other free applications have significant limitations or involve the use of paid advertisements that detract from our purposes. I use some relatively expensive applications for tasks such as video editing and authoring online learning modules. But I also use many free applications for things such as document sharing, web conferencing, video conferencing, media transcoding, audio editing, screen capturing, media posting, and building and hosting wikis, blogs, and web sites.

Why, in particular, should we explore free applications?

- Sometimes, free applications are all that we need. Why purchase or license expensive software when there are free solutions?
- The budgets in PD and TA programs are being dramatically reduced. At the same time, there are greater needs to provide more people with more timely information. Free or low-cost applications can help.
- PD and TA specialists should try to model and encourage the uses of technologies that are accessible to local providers and programs. Free applications, if they are appropriate for the functions that we use them, fit the bill and can enormously help local programs and providers.

Why might some companies and individuals offer free applications?

- To encourage lots of people to use an application that is in development so they can identify and fix the bugs.
- To offer an application as a free, “lite” version in which functionality or quality is limited in the hopes that users will want to migrate to an enhanced pay-for version.
- To offer a trial version.
- To generate revenue through ads or other related plug-ins.
- To gain market share before switching to a fee-based arrangement.
- To offer a “loss-leader.”

- To help change the world for the better by offering widespread and open access to useful digital resources.

Important things to keep in mind about the applications on the following pages

- ❑ Some free applications are very powerful and will allow you to do just about anything that you need to do. Other free applications produce inferior products or lack important functions compared to commercial software. You'll need to try them out and judge for yourself what is good enough for your purposes.
- ❑ Not all programs work on all platforms (PC, Mac) or on all operating systems. I aim for universal design and prefer applications that work on both PCs and Macs, but this is not always possible.
- ❑ Applications are continually updated and new software is published all the time; check often for updates.
- ❑ Downloading programs carries the risk of unwanted cookies, malware, or a virus; use virus protection software and update it frequently.
- ❑ Your IT department and help desk specialists are important resources for you. Consult with them on adoption decisions. Encourage them to learn about the applications that you want to use. Show them your appreciation for keeping you and your computer and network running efficiently and safely. Treat them nice. Buy them gifts.
- ❑ If you are denied access to a web-based application or prevented from downloading or installing a key application, write up a business plan. The plan should make a clear and concise case for how the application is: required for your work, safe and secure, effective, cost-effective. If you are denied access, ask for an alternative application. If you are still denied, find out who in your organization can say "yes" and make another appeal.
- ❑ Some software programs may not be secure; when in doubt, consult with an IT specialist before downloading and installing.
- ❑ Some software may create a conflict with your operating system or other software applications; when in doubt, consult with an IT specialist before downloading and installing.
- ❑ There are thousands of useful, free applications that can (and should) be used to enhance are work. The applications on the following pages are only examples...there are many more choices. Try to do a search on your favorite browser for "free [key word] software."
- ❑ I constantly update this list to try to keep it as up-to-date as possible with emerging developments and information. But some of the applications on this list may not exist by the time you explore them or they may now charge a fee.
- ❑ Many apps do more than one thing. For instance, one app might be used for video conferencing, instant messaging, and as a telephone. Rather than trying to list them in multiple categories, I list them under what I feel might be a good primary category.
- ❑ Remember that free apps come and go. Sometimes they are discontinued and sometimes they start to charge for their use. It is wise to have a backup. www.Go2web20.net provides a great data base of thousands of web applications that you can search by type.
- ❑ Please note that I have not tried out all of the applications on the following pages, so no promises. I used to try out every app in earlier versions of this document, but there are just too many now. But each application listed has been recommended by at least one valued source.
- ❑ This interesting book, offers an interesting perspective: *Free: The Future of a Radical Price* by Chris Anderson, Abridged audio files at: http://www.hyperionbooks.com/free/free_downloads.htm or free audiobook at: http://www.wired.com/techbiz/it/magazine/17-07/mf_freer
